
ZenithR Security Analysis

Date: March 28, 2026

Template:

Overview

Security reconnaissance was performed on zenithr.com. WhatWeb and Nikto were executed against the target URL.

Infrastructure & WAF

The target zenithr.com resolves to www.zenithr.com and is operating behind a **Cloudflare** Web Application Firewall (WAF). Technology Stack: - jQuery - OpenResty

Security Headers Detected

- Strict-Transport-Security (HSTS): **Enabled**, ensuring connections are forced over HTTPS. - **X-Frame-Options:** Set to SAMEORIGIN, protecting against clickjacking attacks.

Nikto Scan Results

The Nikto vulnerability scanner did not detect immediately exploitable local paths. The Cloudflare perimeter is actively routing and filtering malicious payloads, making direct enumeration difficult from an untrusted source.
